ProCleaner X100

For over 10 years, the ProCleaner X100 has transformed the cleaning patterns of pig barns for farmers across the globe. Our robot is an efficient extra worker assisting you in your daily work on your pig farm. A reliable washing robot cutting down the hard manual cleaning work, thus improving the overall work environment for you and your employees.

ProCleaner X100 reduces up to 80% of the time spent on manual washing. Automizing the washing of your pig barns, you will have more time to spend on the well-being of your animals. The robot is easy to operate and designed to fit most pig barns. This is ensured by continuous development based upon experience from 29 international markets so far.

The positive feedback we have received from our customers, both domestic and international, prove that ProCleaner X100 has become an integrated part of their daily work on the farm. A reliable worker who always delivers the same good result - also at night, weekends and holidays.

The globalized world has greatly increased the risk of spreading diseases, not least in animal husbandry. By using our washing robot, you reduce the number of people having access to the pig barns. While the result of manual washing can differ, ProCleaner X100 gives you a good and uniform outcome every time, which is important to increase biosecurity.

Powerful, flexible, and reliable washing robot

Our experience from the many different markets where we have sold the robot shows, that ProCleaner X100 can be adapted to almost all different barn designs. Whether your pig barn has narrow corridors, deep pens, or obstacles which disturb the washing process, we can customize the robot to achieve the best possible result in your specific pig barns.

To make it as easy as possible to move our heavy robot from one pig barn to another, we have designed a trolley which is delivered with each unit. It also helps you to move the robot easily within the narrow corridors that are often found in pig houses. If the robot must be moved up a smaller slope or onto a trailer, the transport program can be used to run in manual mode to gain assistance from the motor.

The ProCleaner is very easy to program and to manage due to the user-friendly touch screen we have developed. Once you have found the perfect settings for your specific pig barns, the robot is operational within just a few moments from entering the farm. You only need to connect the robot to a high-pressure pump and to electricity, push the start button and close the door.

Washpower has developed special nozzles which guarantee a strong and effective water jet, with a range of up to 5 meters. The nozzles and the washing arms can rotate, thus they focus on the floor, inventory or especially dirty areas.
